

## β-Tubulin Monoclonal Antibody(5G3), AbFluor™ 488 Conjugated

using specific immunogen.  Dilution  Optimal working dilutions should be determined experimentally by the investigator. Suggested starting dilutions are as follows: IHC: 1:200, IF 1:200  Concentration  1 mg/ml  Purity  ≥90%  Storage Stability  -20°C/1 year  Synonyms  TUBB3  Observed Band  Cell Pathway  Cytoplasm, cytoskeleton . Cell projection, growth cone . Cell projection, lamellipodium . Cell projection, filopodium .  Tissue Specificity  Expression is primarily restricted to central and peripheral nervous system. Greatly increased expression in most cancerous tissues.  Function  domain: The highly acidic C-terminal region may bind cations such as calcium.,function: Receptor for MSH (alpha, beta and gamma) and ACTH. The activity of this receptor is mediated by G proteins which activate adenylate cyclase., function: Tubulin is the major constituent of microtubules. It binds two moles of GTP, one at an exchangeable site on the beta chain and one at a		
Reactivity Human;Rat;Mouse;Mk;Dg;Ch;Hamster;Rabbit;sheep;Insect;Yeast  Applications WB;IF;IHC  Gene Name TUBB3  Protein Name Tubulin beta-3 chain  Immunogen  Specificity β-Tubulin Monoclonal Antibody(5G3) AbFluor™ 488 Conjugated specially designed for your Immunofluorescence analysis.  Formulation Liquid in PBS, pH 7.4, containing 0.02% sodium azide as preservative and 50% Glycerol.  Source Monoclonal, Mouse IgG1  Purification The antibody was affinity-purified from mouse ascites by affinity-chromatography using specific immunogen.  Dilution Optimal working dilutions should be determined experimentally by the investigator. Suggested starting dilutions are as follows: IHC: 1:200, IF 1:200.  Concentration 1 mg/ml  Purity ≥90%  Storage Stability -20°C/1 year  Synonyms TUBB3  Observed Band  Cell Pathway Cytoplasm, cytoskeleton. Cell projection, growth cone. Cell projection, lamellipodium. Cell projection, filopodium.  Tissue Specificity Expression is primarily restricted to central and peripheral nervous system. Greatly increased expression in most cancerous tissues.  Function domain: The highly acidic C-terminal region may bind cations such as calcium, function: Receptor for MSH (alpha, beta and gamma) and ACTH. The activity of this receptor is mediated by G proteins which activate adenylate cyclase, function: Tubulin is the major constituent of microtubules. It brinds two moles of GTP, one at an exchangeable site on the beta chain and one at a	Catalog No	BYab-04713

	examples of human phenotypic variation, with a broad normal range that is subject to substantial geographic stratification. In the case of skin, individuals tend to have lighter pigmentation with increasing distance from the equator. By contrast, the majority of variation in human eye and hair col
Background	tubulin beta 3 class III(TUBB3) Homo sapiens This gene encodes a class III member of the beta tubulin protein family. Beta tubulins are one of two core protein families (alpha and beta tubulins) that heterodimerize and assemble to form microtubules. This protein is primarily expressed in neurons and may be involved in neurogenesis and axon guidance and maintenance. Mutations in this gene are the cause of congenital fibrosis of the extraocular muscles type 3. Alternate splicing results in multiple transcript variants. A pseudogene of this gene is found on chromosome 6. [provided by RefSeq, Oct 2010],
