Tissue Specificity	Liver and promyelocytic leukemia cell line HL-60.
Function	developmental stage:Expressed during hematopoiesis.,function:Recognizes the DNA sequence 5'-ATTAA-3'. Transcriptional repressor. May play a role in hematopoietic differentiation. Establishes anterior identity at two levels; acts early to enhance canonical WNT-signaling by repressing expression of TLE4, and acts later to inhibit NODAL-signaling by directly targeting NODAL.,similarity:Contains 1 homeobox DNA-binding domain.,tissue specificity:Liver and promyelocytic leukemia cell line HL60.,
Background	This gene encodes a member of the homeobox family of transcription factors, many of which are involved in developmental processes. Expression in specific hematopoietic lineages suggests that this protein may play a role in hematopoietic differentiation. [provided by RefSeq, Jul 2008],
