<b>Function</b>	caution:Was named (PubMed:18196551) 'Kallikrein-related in prostate protein 1' because this protein is encoded by a transcript from the KLKP1 gene region. It is encoded in an exon which is similar to the intronic region between exons 1 and 2 of KLK1, KLK2 and KLK3.,induction:By androgens.,tissue specificity:Abundant expression is found in prostate, restricted to cells of epithelial origin in normal and diseased glands. Very low expression is detected in pancreas and ovary.,
