Observed Band	
Cell Pathway	Secreted .
Tissue Specificity	Activated monocytes and activated T lymphocytes.
Function	function:Chemotactic for resting T-lymphocytes, and eosinophils. Has lower chemotactic activity for neutrophils but none for monocytes and activated lymphocytes. Is a strong suppressor of colony formation by a multipotential hematopoietic progenitor cell line. Binds to CCR3.,online information:CCL24 entry,PTM:N-glycosylated.,similarity:Belongs to the intercrine beta (chemokine CC) family.,tissue specificity:Activated monocytes and activated T lymphocytes.,
Background	This gene belongs to the subfamily of small cytokine CC genes. Cytokines are a family of secreted proteins involved in immunoregulatory and inflammatory

	processes. The CC cytokines are proteins characterized by two adjacent cysteines. The cytokine encoded by this gene displays chemotactic activity on resting T lymphocytes, a minimal activity on neutrophils, and is negative on monocytes and activated T lymphocytes. The protein is also a strong suppressor of colony formation by a multipotential hematopoietic progenitor cell line. [provided by RefSeq, Jul 2008],
