

FADD mouse mAb

Reactivity Human Applications WB Gene Name fadd Protein Name Immunogen Purified recombinant human FADD protein fragments expressed in E.coli. Specificity This antibody detects endogenous levels of FADD and does not cross-react with related proteins. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Monoclonal, Mouse Purification The antibody was affinity-purified from mouse ascites by affinity-chromatography using epitope-specific immunogen. Dilution wb dilution 1:1000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms FADD;FADD protein;FADD_HUMAN;Fas (TNFRSF6) associated via death domain;Fas associating death domain containing protein;Fas associating death domain containing protein;Fas associated via death domain containing protein;Fas associated via death domain;Fas-associated via death domain;Fas-assoc

Cell Pathway	cytoplasm,cytosol,plasma membrane,death-inducing signaling complex,CD95 death-inducing signaling complex,neuron projection,cell body,membrane raft,ripoptosome,
Tissue Specificity	Expressed in a wide variety of tissues, except for peripheral blood mononuclear leukocytes.
Function	domain:Contains a death domain involved in the binding of the corresponding domain within Fas receptor.,function:Apoptotic adaptor molecule that recruits caspase-8 or caspase-10 to the activated Fas (CD95) or TNFR-1 receptors. The resulting aggregate called the death-inducing signaling complex (DISC) performs caspase-8 proteolytic activation. Active caspase-8 initiates the subsequent cascade of caspases mediating apoptosis.,PTM:Phosphorylated.,similarity:Contains 1 death domain.,similarity:Contains 1 DED (death effector) domain.,subunit:Interacts with CFLAR, PEA15 and MBD4. When phosphorylated, part of a complex containing HIPK3 and FAS. May interact with MAVS/IPS1. Interacts with MOCV v-CFLAR protein and LRDD.,tissue specificity:Expressed in a wide variety of tissues, except for peripheral blood mononuclear leukocytes.,
Background	The protein encoded by this gene is an adaptor molecule that interacts with various cell surface receptors and mediates cell apoptotic signals. Through its C-terminal death domain, this protein can be recruited by TNFRSF6/Fas-receptor, tumor necrosis factor receptor, TNFRSF25, and TNFSF10/TRAIL-receptor, and thus it participates in the death signaling initiated by these receptors. Interaction of this protein with the receptors unmasks the N-terminal effector domain of this protein, which allows it to recruit caspase-8, and thereby activate the cysteine protease cascade. Knockout studies in mice also suggest the importance of this protein in early T cell development. [provided by RefSeq, Jul 2008],
