

BID (Cleaved-Arg71) mouse mAb

Catalog No BYmab-00031 Isotype IgG Reactivity Human;Mouse Applications WB Gene Name BID Protein Name BID (Cleaved-Arg71) Immunogen Synthesized peptide derived from human BID (Cleaved-Arg71) Specificity This antibody detects endogenous levels of Human,Mouse BID (Cleaved-Arg71, protein was cleaved amino acid sequence between 71-72) Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Monocional, Mouse,IgG Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-2000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms BH3-interacting domain death agonist (p22 BID;BID) [Cleaved into: BH3-interacting domain death agonist p15 (p15 BID); BH3-interacting domain death agonist p11 (p11 BID)] Observed Band 3 22KD Cell Pathway Cytoplasm , Mitochondrion membrane . Mitochondrion outer membrane . When uncleaved, it is predominantly cytoplasmic.; [BH3-interacting domain death agonist p13]: Mitochondrion membrane . Translocates to mitochondria a membrane .				
Applications WB Gene Name BID Protein Name BID (Cleaved-Arg71) Immunogen Synthesized peptide derived from human BID (Cleaved-Arg71) Specificity This antibody detects endogenous levels of Human, Mouse BID (Cleaved-Arg71, protein was cleaved armino acid sequence between 71-72) Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Monoclonal, Mouse, IgG Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-2000 Concentration 1 mg/ml Purity 290% Storage Stability -20°C/1 year Synonyms BH3-interacting domain death agonist (p22 BID;BID) [Cleaved into: BH3-interacting domain death agonist p15 (p15 BID); BH3-interacting domain death agonist p11 (p11 BID)] Observed Band 8 22kD Cell Pathway Cytoplasm Mitochondrion membrane Mitochondrion outer membrane . When uncleaved, it is predominantly cytoplasmic; [BH3-interacting domain death agonist p13]; Mitochondrion membrane . Translocates to mitochondria as an integral membrane protein; [BH3-interacting domain death agonist p13]; Mitochondrion membrane Tissocates to mitochondria as an integral membrane protein; [BH3-interacting domain death agonist p13]; Mitochondrion membrane Tissoform 2]: Mitochondrion membrane Significant proportion of isoform 2 localizes to mitochondria, it may be cleaved constitutively Tissue Specificity Issoform 13: Expressed in lung, pancreas and spleen (at protein level).; [Issoform 15]: Expressed in lung, pancreas and spleen (at protein level).; [Issoform 15]: Expressed in lung, pancreas and spleen (at protein level).; [Issoform 15]: Expressed in lung, pancreas and spleen (at protein level).; [Issoform 15]: Expressed in lung, pancreas and spleen (at protein level).; [Issoform 15]: Expressed in lung, pancreas and spleen (at protein level).; [Issoform 15]: Expressed in lung, pancreas and spleen (at protein level).; [Issoform 15]: Expressed in lung, pancreas and spleen (at protein leve	Catalog No	BYmab-00031

Background

domain:Intact BH3 motif is required by BIK, BID, BAK, BAD and BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bcl-2 family.,function:The major proteolytic product p15 BID allows the release of cytochrome c (By similarity). Isoform 1, isoform 2 and isoform 4 induce ICE-like proteases and apoptosis. Isoform 3 does not induce apoptosis. Counters the protective effect of Bcl-2.,PTM:Phosphorylated upon DNA damage, probably by ATM or ATR.,PTM:TNF-alpha induces a caspase-mediated cleavage of p22 BID into a major p15 and minor p13 and p11 products.,subcellular location:A significant proportion of isoform 2 localizes to mitochondria, it may be cleaved constitutively.,subcellular location:Associated with the mitochondrial membrane.,subcellular location:Translocates to mitochondria as an integral membrane protein.,subcellular location:When uncleaved, it is predominantly cytoplasmic.,subunit:Forms heterodimers either with the pro-apoptotic protein BAX or the anti-apoptotic protein Bcl-2.,tissue specificity:Isoforms 2 and 3 are expressed in spleen, bone marrow, cerebral and cerebellar cortex. Isoform 2 is expressed in spleen, pancreas and placenta (at protein level). Isoform 4 is expressed in lung, pancreas (at protein level).
