

Myosin VA Monoclonal Antibody

Catalog No	BYmab-03166
Isotype	IgG
Reactivity	Human;Mouse;Rat
Applications	WB
Gene Name	MYO5A
Protein Name	Unconventional myosin-Va
Immunogen	The antiserum was produced against synthesized peptide derived from human MYO5A. AA range:1784-1833
Specificity	Myosin VA Monoclonal Antibody detects endogenous levels of Myosin VA protein.
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Monoclonal, Mouse,IgG
Purification	The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	WB 1:500-2000
Concentration	1 mg/ml
Concentration Purity	1 mg/ml ≥90%
Purity	≥90%
Purity Storage Stability	≥90% -20°C/1 year MYO5A; MYH12; Unconventional myosin-Va; Dilute myosin heavy chain;
Purity Storage Stability Synonyms	≥90% -20°C/1 year MYO5A; MYH12; Unconventional myosin-Va; Dilute myosin heavy chain; non-muscle; Myosin heavy chain 12; Myosin-12; Myoxin
Purity Storage Stability Synonyms Observed Band	≥90% -20°C/1 year MYO5A; MYH12; Unconventional myosin-Va; Dilute myosin heavy chain; non-muscle; Myosin heavy chain 12; Myosin-12; Myoxin 220kD ruffle,photoreceptor outer segment,cytoplasm,lysosome,early endosome,late endosome,peroxisome,endoplasmic reticulum,Golgi apparatus,cytosol,intermediate filament,actin filament,membrane,myosin

	syndrome is a rare autosomal recessive disorder that results in pigmentary dilution of the skin and hair, the presence of large clumps of pigment in hair shafts, silvery-gray hair and accumulation of melanosomes in melanocytes. GS1 patients show developmental delay, hypotonia and ment
Background	This gene is one of three myosin V heavy-chain genes, belonging to the myosin gene superfamily. Myosin V is a class of actin-based motor proteins involved in cytoplasmic vesicle transport and anchorage, spindle-pole alignment and mRNA translocation. The protein encoded by this gene is abundant in melanocytes and nerve cells. Mutations in this gene cause Griscelli syndrome type-1 (GS1), Griscelli syndrome type-3 (GS3) and neuroectodermal melanolysosomal disease, or Elejalde disease. Multiple alternatively spliced transcript variants encoding different isoforms have been reported, but the full-length nature of some variants has not been determined. [provided by RefSeq, Dec 2008],
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
