

ABCA7 Monoclonal Antibody

Catalog No				
	BYmab-05349			
Isotype	IgG			
Reactivity	Human;Rat;Mouse;			
Applications	WB			
Gene Name	ABCA7			
Protein Name	ATP-binding cassette sub-family A member 7 (ABCA-SSN) (Autoantigen SS-N) (Macrophage ABC transporter)			
Immunogen	Synthesized peptide derived from human protein . at AA range: 2050-2130			
Specificity	ABCA7 Monoclonal Antibody detects endogenous levels of protein.			
Formulation	Liquid in PBS containing 50% glycerol, and 0.02% sodium azide.			
Source	Monoclonal, Mouse,IgG			
Purification	The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.			
Dilution	WB 1:500-2000			
Dilution	VVB 1.500 2000			
Concentration	1 mg/ml			
Concentration	1 mg/ml			
Concentration Purity	1 mg/ml ≥90%			
Concentration Purity Storage Stability	1 mg/ml ≥90%			
Concentration Purity Storage Stability Synonyms	1 mg/ml ≥90% -20°C/1 year

developmental stage:Expressed in fetal tissues. Strongly expressed in fetal liver.,function:Plays a role in phagocytosis by macrophages of apoptotic cells. Binds APOA1 and may function in apolipoprotein-mediated phospholipid efflux from cells. May also mediate cholesterol efflux. May regulate cellular ceramide homeostasis during keratinocytes differentiation.,induction:Up-regulated in macrophages upon cholesterol uptake and inversely regulated upon cholesterol deloading from the cells (at protein level). Up-regulated in keratinocytes during terminal differentiation.,similarity:Belongs to the ABC transporter family. ABCA subfamily.,similarity:Contains 2 ABC transporter domains.,subcellular location:Localizes to cell membrane ruffles and phagocytic cups of macrophages stimulated with C1q or apoptotic cells. Localizes to the cytoplasm of resting macrophages, probably in Golgi and endosomes.

Background

The protein encoded by this gene is a member of the superfamily of ATP-binding cassette (ABC) transporters. ABC proteins transport various molecules across extra- and intra-cellular membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP, MRP, ALD, OABP, GCN20, White). This protein is a member of the ABC1 subfamily. Members of the ABC1 subfamily comprise the only major ABC subfamily found exclusively in multicellular eukaryotes. This full transporter has been detected predominantly in myelo-lymphatic tissues with the highest expression in peripheral leukocytes, thymus, spleen, and bone marrow. The function of this protein is not yet known; however, the expression pattern suggests a role in lipid homeostasis in cells of the immune system. [provided by RefSeq, Jul 2008],
