

## CYTS Monoclonal Antibody

Catalog No         BYmab-06818           Isotype         IgG           Reactivity         Human;Rat;Mouse;           Applications         WB           Gene Name         CST4           Protein Name         Cystatin-S (Cystatin-4) (Cystatin-SA-III) (Salivary acidic protein 1)           Immunogen         Synthesized peptide derived from part region of human protein           Specificity         CYTS Monoclonal Antibody detects endogenous levels of protein.           Formulation         Liquid in PBS containing 50% glycerol, and 0.02% sodium azide.           Source         Monoclonal, Mouse, IgG           Purification         The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.           Dilution         WB 1:500-2000           Concentration         1 mg/ml           Purity         ≥90%           Storage Stability         -20*C/1 year           Synonyms         Observed Band         15kD           Cell Pathway         Secreted .         Expressed in submandibular and sublingual saliva but not in parotid saliva (at protein level). Expressed in saliva, tears, urine and seminal fluid.           Function         function:This protein strongly inhibits papain and ficin, partially inhibits stem brownelain and bovine cathepsin C, but does not Inhibit protein cathepsin B or clostripain. Pelonging to the cystatin family, tissue		
Reactivity Human;Rat;Mouse;  Applications WB  Gene Name CST4  Protein Name Cystatin-S (Cystatin-4) (Cystatin-SA-III) (Salivary acidic protein 1)  Immunogen Synthesized peptide derived from part region of human protein  Specificity CYTS Monoclonal Antibody detects endogenous levels of protein.  Formulation Liquid in PBS containing 50% glycerol, and 0.02% sodium azide.  Source Monoclonal, Mouse, IgG  Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.  Dilution WB 1:500-2000  Concentration 1 mg/ml  Purity ≥90%  Storage Stability -20°C/1 year  Synonyms  Observed Band 15kD  Cell Pathway Secreted.  Tissue Specificity Expressed in submandibular and sublingual saliva but not in parotid saliva (at protein level). Expressed in saliva, tears, urine and seminal fluid.  Function function: This protein strongly inhibits papain and fcin, partally inhibits stem bromelain and bovine cathepsin C, but does not inhibit procine cathepsin B or clostripain. Papan is inhibited non-competitively. PTM:Phosporlated at both its N- and C-terminal regions, similarity:Belongs to the cystatin family, tissue sepecificity; Found in saliva, tears, urine and seminal fluid.  The cystatin superfamily encompasses proteins that contain multiple cystatin-like sequences. Some of the members are active cysteine protease inhibitory, while others have lost or perhaps never acquired this inhibitory activity. There are three inhibitory families in the superfamily, including the type 1 cystatins (stefens), type 2 cystatins foreins are a class of cysteine	Catalog No	BYmab-06818

	cystatin locus on chromosome 20 contains the majority of the type 2 cystatin genes and pseudogenes. This gene is located in the cystatin locus and encodes a type 2 salivary cysteine peptidase inhibitor. The protein is an S-type cystatin, based on its high level of expression in saliva, tears and seminal plasma. The specific role in these fluids is unclear but antibacterial and antiviral activity is present, consistent with
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
