Function	function:May play a role in B-lineage commitment and/or modulation of signaling through the B-cell receptor.,similarity:Contains 1 Ig-like C2-type (immunoglobulin-like) domain.,tissue specificity:Expressed in lymph node, spleen, thymus and bone marrow.,
Background	This gene encodes a member of the CD2 family of cell surface proteins involved in lymphocyte activation. These proteins are characterized by Ig domains. This protein is expressed in lymphoid tissues, and studies of a similar protein in mouse suggest that it may function during B cell lineage commitment. The gene is found in a region of chromosome 1 containing many CD2 genes. [provided by RefSeq, Jul 2008],
