

OR1J2 Monoclonal Antibody

family.,Backgroundolfactory receptor family 1 subfamily J member 2(OR1J2) Homo sapiens Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and hormone receptors and are responsible for the recognition and G protein-mediated		
Reactivity Human;Rat;Mouse; Applications WB Gene Name OR1J2 OR1J3 OR1J5 Protein Name Olfactory receptor 1J2 (HSA5) (HTPCRX15) (OST044) (Olfactory receptor 1J3) (Olfactory receptor 1J3) (Olfactory receptor OR9-19) Immunogen Synthesized peptide derived from part region of human protein AA range: 100-150 Specificity OR1J2 Monoclonal Antibody detects endogenous levels of protein. Formulation Liquid in PBS containing 50% glycerol, and 0.02% sodium azide. Source Monoclonal, Mouse,IgG Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-2000 Concentration 1 mg/ml Purify ≥90% Storage Stability -20°C/1 year Synonyms Cell membrane; Multi-pass membrane protein. Tissue Specificity Testis, Function function:Odorant receptor .,similarity:Belongs to the G-protein coupled receptor ramily., arey receptors interact with odorant molecules in the nose, to intitate a neuronal response that triggers the perception of a smell. The olfactory receptor sinteract with odorant molecules in the nose, to intitate a neuronal response that perception of a smell. The olfactory receptor sinteract with dorant molecules in the nose, to inflate a neuronal response the receptor receptors sinteract with dorant molecules in the nose, to inflate a neuronal response that triggers the perception of a smell.
