

## DAB2 mouse mAb

| Catalog No         | BYmab-08218   |
|--------------------|---|
| lsotype            | IgG   |
| Reactivity         | Human; Mouse;Rat  |
| Applications       | WB  |
| Gene Name          | DAB2 DOC2   |
| Protein Name       | DAB2  |
| Immunogen          | Synthesized peptide derived from human DAB2 AA range: 683-733   |
| Specificity        | This antibody detects endogenous levels of DAB2 at Human/Mouse/Rat  |
| Formulation        | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.333% sodium azide.  |
| Source             | Monoclonal, Mouse,IgG   |
| Purification       | The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.  |
| Dilution           | WB 1:500-2000   |
| Concentration      | 1 mg/ml   |
| Purity             | ≥90%  |
| Storage Stability  | -20°C/1 year  |
| Synonyms           | Disabled homolog 2 (DOC-2) (Differentially-expressed protein 2)   |
| Observed Band      | 85kD  |
| Cell Pathway       | Cytoplasm. Cytoplasmic vesicle, clathrin-coated vesicle membrane. Membrane,<br>clathrin-coated pit. Colocalizes with large insert-containing isoforms of MYO6 at<br>clathrin-coated pits/vesicles. During mitosis is progressively displaced from the<br>membrane and translocated to the cytoplasm.  |
| Tissue Specificity | Expressed in deep invaginations, inclusion cysts and the surface epithelial cells of<br>the ovary. Also expressed in breast epithelial cells, spleen, thymus, prostate,<br>testis, macrophages, fibroblasts, lung epithelial cells, placenta, brain stem, heart<br>and small intestine. Expressed in kidney proximal tubular epithelial cells (at<br>protein level).  |
| Function           | function:Component of the CSF-1 signal transduction pathway.,similarity:Contains<br>1 PID domain.,subcellular location:Colocalizes with large insert-containing<br>isoforms of MYO6 at clathrin-coated pits/vesicles.,subunit:Interacts with the<br>globular tail of MYO6. Interacts with DAB2IP. Interacts with NOSTRIN.,tissue<br>specificity:Expressed in deep invaginations, inclusion cysts and the surface<br>epithelial cells of the ovary. Also expressed in breast epithelial cells, spleen, |

|                           | thymus, prostate, testis, macrophages, fibroblasts, lung epithelial cells, placenta, brain stem, heart and small intestine.,   |
|---------------------------|--|
| Background                | This gene encodes a mitogen-responsive phosphoprotein. It is expressed in<br>normal ovarian epithelial cells, but is down-regulated or absent from ovarian<br>carcinoma cell lines, suggesting its role as a tumor suppressor. This protein binds<br>to the SH3 domains of GRB2, an adaptor protein that couples tyrosine kinase<br>receptors to SOS (a guanine nucleotide exchange factor for Ras), via its<br>C-terminal proline-rich sequences, and may thus modulate growth factor/Ras<br>pathways by competing with SOS for binding to GRB2. Alternatively spliced<br>transcript variants encoding different isoforms have been found for this gene.<br>[provided by RefSeq, Oct 2011], |
|                           |  |
| matters needing attention | Avoid repeated freezing and thawing!   |
| Usage suggestions         | This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.  |
