Function	function:Specialized low-affinity vasopressin-regulated urea transporter. Mediates rapid transepithelial urea transport across the inner medullary collecting duct and plays a major role in the urinary concentrating mechanism.,induction:Isoform 1 is induced by low protein in the diet, isoform 2 by dehydration.,similarity:Belongs to the urea transporter family.,subunit:Isoform 1 interacts with SNAPIN which may be important for recruitment to the plasma membrane.,tissue specificity:Isoform 1 and isoform 2 are expressed in the inner medulla of the kidney.,
Background	The protein encoded by this gene belongs to the urea transporter family. In mammalian cells, urea is the chief end product of nitrogen catabolism, and plays an important role in the urinary concentration mechanism. This protein is expressed in the inner medulla of the kidney, and mediates rapid transepithelial
