Function	function:Could be a novel TATA-binding protein (TBP) which can function as a basal transcription activator. Can act as a regulator of basal transcription for class II genes.,similarity:Belongs to the ESF2/ABP1 family.,similarity:Contains 1 RRM (RNA recognition motif) domain.,subunit:Interacts with ESF1/ABTAP.,
Background	Basal transcription of genes by RNA polymerase II requires the interaction of TATA-binding protein (TBP) with the core region of class II promoters. Studies in mouse suggest that the protein encoded by this gene likely activates basal transcription from class II promoters by interaction with TBP and the class II promoter DNA.
