

WISP-3 Monoclonal Antibody

Catalog No	BYmab-10636
Isotype	IgG
Reactivity	Human;Rat;Mouse;
Applications	WB
Gene Name	WISP3 CCN6 UNQ462/PRO790/PRO956
Protein Name	WNT1-inducible-signaling pathway protein 3 (WISP-3) (CCN family member 6)
Immunogen	The antiserum was produced against synthesized peptide derived from the N-terminal region of human WISP3. AA range:1-50
Specificity	The antibody detects endogenous WISP-3
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Monoclonal, Mouse,IgG
Purification	The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	WB 1:500-2000
Concentration	1 mg/ml
Purity	≥90%
1 dilty	
Storage Stability	-20°C/1 year
	-20°C/1 year WNT1-inducible-signaling pathway protein 3 (WISP-3) (CCN family member 6)
Storage Stability	·
Storage Stability Synonyms	WNT1-inducible-signaling pathway protein 3 (WISP-3) (CCN family member 6)
Storage Stability Synonyms Observed Band	WNT1-inducible-signaling pathway protein 3 (WISP-3) (CCN family member 6) 55kD
Storage Stability Synonyms Observed Band Cell Pathway	WNT1-inducible-signaling pathway protein 3 (WISP-3) (CCN family member 6) 55kD Secreted . Mitochondrion . Associated with membranes Predominant expression in adult kidney and testis and fetal kidney. Weaker expression found in placenta, ovary, prostate and small intestine (PubMed:9843955, PubMed:10471507). Also expressed in skeletally-derived cells such as synoviocytes and articular cartilage chondrocytes

CTCK (C-terminal cystine knot-like) domain.,similarity:Contains 1 IGFBP
N-terminal domain., similarity: Contains 1 TSP type-1 domain., tissue
specificity: Predominant expression in adult kidney and testis and fetal kidney.
Weaker expression found in placenta, ovary, pro

Background

This gene encodes a member of the WNT1 inducible signaling pathway (WISP) protein subfamily, which belongs to the connective tissue growth factor (CTGF) family. WNT1 is a member of a family of cysteine-rich, glycosylated signaling proteins that mediate diverse developmental processes. The CTGF family members are characterized by four conserved cysteine-rich domains: insulin-like growth factor-binding domain, von Willebrand factor type C module, thrombospondin domain and C-terminal cystine knot-like domain. This gene is overexpressed in colon tumors. It may be downstream in the WNT1 signaling pathway that is relevant to malignant transformation. Mutations of this gene are associated with progressive pseudorheumatoid dysplasia, an autosomal recessive skeletal disorder, indicating that the gene is essential for normal postnatal skeletal growth and cartilage homeostasis.
