

CD40 ligand mouse mAb

Catalog No BYmab-12514 Isotype IgG Reactivity Human;Rat;Mouse; Applications WB Gene Name CD40LG CD40L TNFSF5 TRAP Protein Name CD40 ligand Immunogen Synthesized peptide derived from human CD40 ligand Specificity This antibody detects endogenous levels of Human CD40 ligand Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Monoclonal, Mouse, IgG Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-2000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms CD40 ligand (CD40-L;T-cell antigen Gp39;TNF-related activation protein;TRAP;Tumor necrosis factor ligand superfamily member 5;CD antigen CD154) [Cleaved into: CD40 ligand, membrane form; CD40 ligand, soluble form] Observed Band Cell Pathway Cell membrane; Single-pass type II membrane protein. Cell surface; [CD40 ligand, soluble form]: Secreted . Release of soluble CD40L from platelets is partially regulated by GP IIDI/Ia, actin polymerization, and a matrix metalloproteinases (MPI) inhibitor-sensitive pathway. </th <th></th> <th></th>		
Reactivity Human;Rat;Mouse; Applications WB Gene Name CD40LG CD40L TNFSF5 TRAP Protein Name CD40 ligand Immunogen Synthesized peptide derived from human CD40 ligand Specificity This antibody detects endogenous levels of Human CD40 ligand Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. 	immunity, adaptive immune response based on somatic recombination of immune receptors built from immunoglobulin superfamily domains, immune system development, leukocyte differentiation, somatic diversification of immune receptors via germline recombination within a single locus, regulation of immunoglobulin production, regulation of immune effector process, regulation of production of molec
Background	disease:Defects in CD40LG are the cause of X-linked immunodeficiency with hyper-IgM type 1 (HIGM1) [MIM:308230]; also known as X-linked hyper IgM syndrome (XHIM). HIGM1 is an immunoglobulin isotype switch defect characterized by elevated concentrations of serum IgM and decreased amounts of all other isotypes. Affected males present at an early age (usually within the first year of life) recurrent bacterial and opportunistic infections, including Pneumocystis carinii pneumonia and intractable diarrhea due to cryptosporidium infection. Despite substitution treatment with intravenous immunoglobulin, the overall prognosis is rather poor, with a death rate of about 10% before adolescence, function:Mediates B-cell proliferation in the absence of co-stimulus as well as IgE production in the presence of IL-4. Involved in immunoglobulin class switching, function:Release of soluble CD40L from platelets is partially regulated by GP Ilb/Illa, actin polymerization, and an matrix metalloproteinases (MMP) inhibitor-sensitive pathway.,online information:CD40L defect database,PTM:N-linked glycan is a mixture of high mannose and complex type. Glycan structure does not influence binding affinity to CD40.,PTM:Not O-glycosylated.,PTM:The soluble form derives from the membrane form by proteolytic processing.,similarity:Belongs to the tumor necrosis factor family.,subunit:Homotrimer.,tissue specificity:Specifically expressed on activated CD4+ T-lymphocytes.,
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
