

## STAT5A/B mouse mAb

Formulation Liquid in PBS containing 50% glycerol, and 0.28% sodium azide.   Source Monoclonal, Mouse, IgG   Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.   Dilution WB 1:500-2000   Concentration 1 mg/ml   Purity ≥90%   Storage Stability -20°C/1 year   Synonyms Signal transducer and activator of transcription 5A   Observed Band Cytoplasm . Nucleus . Translocated into the nucleus in response to phosphorylation.   Tissue Specificity Brain, Cervix, Epithelium, Lung, Placenta, Synovial memb   Function function: Carries out a dual function: signal transduction and activation of transcription. Binds to the GAS element and activates PRL-induced transcription. Jonline information: STATS entry. PTM. Tyrosine phosphorylated in response to DNA-brinding activity and dimerization. Serine phosphorylation is a store required for DNA-brinding activity, similarity: Belongs to the transcription factor STAT family, similarity: Contains 1 SH2 domain. subcellular location: Translocated into the nucleus in response to the required for DNA-brinding activity, and dimerization. Serine phosphorylation is a store required for DNA-brinding activity, and imerization. Serine phosphorylation is a store required for DNA-brinding activity, similarity: Belongs to the transcription factor STAT family, similarity: Belongs to the transcription and thrombopoletion.		
Reactivity Human; Mouse;Rat   Applications WB   Gene Name STAT5A STAT5   Protein Name STAT5A/B   Immunogen Synthesized peptide derived from human STAT5A/B   Specificity This antibody detects endogenous levels of STAT5A/B at Human, Mouse,Rat   Formulation Liquid in PBS containing 50% glycerol, and 0.28% sodium azide. Background	The protein encoded by this gene is a member of the STAT family of transcription factors. In response to cytokines and growth factors, STAT family members are phosphorylated by the receptor associated kinases, and then form homo- or heterodimers that translocate to the cell nucleus where they act as transcription activators. This protein is activated by, and mediates the responses of many cell ligands, such as IL2, IL3, IL7 GM-CSF, erythropoietin, thrombopoietin, and different growth hormones. Activation of this protein in myeloma and lymphoma associated with a TEL/JAK2 gene fusion is independent of cell stimulus and has been shown to be essential for tumorigenesis. The mouse counterpart of this gene is found to induce the expression of BCL2L1/BCL-X(L), which suggests the antiapoptotic function of this gene in cells. Alternatively spliced transcript variants have been
