

Neu (phospho Tyr877) Monoclonal Antibody

Catalog No	BYmab-12986
Isotype	IgG
Reactivity	Human;Mouse;Rat
Applications	WB
Gene Name	ERBB2
Protein Name	Receptor tyrosine-protein kinase erbB-2
Immunogen	The antiserum was produced against synthesized peptide derived from human HER2 around the phosphorylation site of Tyr877. AA range:851-900
Specificity	Phospho-Neu (Y877) Monoclonal Antibody detects endogenous levels of Neu protein only when phosphorylated at Y877.
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Monoclonal, Mouse,IgG
Purification	The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	WB 1:500-2000
• 4	
Concentration	1 mg/ml
Purity	1 mg/ml ≥90%
Purity	≥90%

Background

This gene encodes a member of the epidermal growth factor (EGF) receptor family of receptor tyrosine kinases. This protein has no ligand binding domain of its own and therefore cannot bind growth factors. However, it does bind tightly to other ligand-bound EGF receptor family members to form a heterodimer, stabilizing ligand binding and enhancing kinase-mediated activation of downstream signalling pathways, such as those involving mitogen-activated protein kinase and phosphatidylinositol-3 kinase. Allelic variations at amino acid positions 654 and 655 of isoform a (positions 624 and 625 of isoform b) have been reported, with the most common allele, Ile654/Ile655, shown here. Amplification and/or overexpression of this gene has been reported in numerous cancers, including breast and ovarian tumors. Alternative splicing results in several additional transcript variants, some encoding d
