

## **IGF-IR Monoclonal Antibody**

| Catalog No         | BYmab-13367   |
|--------------------|---|
| lsotype            | lgG   |
| Reactivity         | Human;Mouse;Rat   |
| Applications       | WB  |
| Gene Name          | IGF1R   |
| Protein Name       | Insulin-like growth factor 1 receptor   |
| Immunogen          | The antiserum was produced against synthesized peptide derived from human IGF1R. AA range:1131-1180   |
| Specificity        | IGF-IR Monoclonal Antibody detects endogenous levels of IGF-IR protein.   |
| Formulation        | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.   |
| Source             | Monoclonal, Mouse,IgG   |
| Purification       | The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.  |
| Dilution           | WB 1:500-2000   |
| Concentration      | 1 mg/ml   |
| Purity             | ≥90%  |
| Storage Stability  | -20°C/1 year  |
| Synonyms           | IGF1R; Insulin-like growth factor 1 receptor; Insulin-like growth factor I receptor; IGF-I receptor; CD antigen CD221   |
| Observed Band      | pro: 155kD recet/ beta: 95kD  |
| Cell Pathway       | Cell membrane ; Single-pass type I membrane protein .   |
| Tissue Specificity | Found as a hybrid receptor with INSR in muscle, heart, kidney, adipose tissue, skeletal muscle, hepatoma, fibroblasts, spleen and placenta (at protein level). Expressed in a variety of tissues. Overexpressed in tumors, including melanomas cancers of the colon, pancreas prostate and kidney.  |
| Function           | catalytic activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine<br>phosphate.,disease:Defects in IGF1R may be a cause in some cases of<br>resistance to insulin-like growth factor 1 (IGF1 resistance) [MIM:270450]. IGF1<br>resistance is a gowth deficiency disorder characterized by intrauterine growth<br>retardation and poor postnatal growth accompanied with increased plasma<br>IGF1.,enzyme regulation:Autophosphorylation activates the kinase<br>activity.,function:This receptor binds insulin-like growth factor 1 (IGF1) with a hig<br>affinity and IGF2 with a lower affinity. It has a tyrosine-protein kinase activity, |

|                           | which is necessary for the activation of the IGF1-stimulated downstream signaling cascade. When present in a hybrid receptor with INSR, binds IGF1. PubMed:12138094 shows that hybrid receptors composed of IGF1R and INSR isoform Long are activated with a high affinity by IGF1, with low a  |  |
|---------------------------|---|--|
| Background                | This receptor binds insulin-like growth factor with a high affinity. It has tyrosine kinase activity. The insulin-like growth factor I receptor plays a critical role in transformation events. Cleavage of the precursor generates alpha and beta subunits. It is highly overexpressed in most malignant tissues where it functions as an anti-apoptotic agent by enhancing cell survival. Alternatively spliced transcript variants encoding distinct isoforms have been found for this gene. [provided by RefSeq, May 2014], |  |
| matters needing attention | Avoid repeated freezing and thawing!  |  |
| Usage suggestions         | This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.   |  |
