

Cleaved-C1r HC (R463) Monoclonal Antibody

BYmab-13773
IgG
Human;Rat;Mouse;
WB
C1R
Complement C1r subcomponent
The antiserum was produced against synthesized peptide derived from human C1R. AA range:414-463
Cleaved-C1r HC (R463) Monoclonal Antibody detects endogenous levels of fragment of activated C1r HC protein resulting from cleavage adjacent to R463.
Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Monoclonal, Mouse,IgG
The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.
WB 1:500-2000
1 mg/ml
≥90%
-20°C/1 year
C1R; Complement C1r subcomponent; Complement component 1 subcomponent r
51kD
Secreted .
Adipose tissue,Colon endothelium,Liver,Plasma,Skin,
catalytic activity: Selective cleavage of Lys(or Arg)- -Ile bond in complement subcomponent C1s to form the active form of C1s (EC 3.4.21.42)., function: C1r B chain is a serine protease that combines with C1q and C1s to form C1, the first component of the classical pathway of the complement system., polymorphism: Complement component C1r deficiency [MIM:216950] leads to the failure of the classical complement system activation pathway (C1

Background	catalytic activity: Selective cleavage of Lys(or Arg)- -lle bond in complement subcomponent C1s to form the active form of C1s (EC 3.4.21.42)., function: C1r B chain is a serine protease that combines with C1q and C1s to form C1, the first component of the classical pathway of the complement system., polymorphism: Complement component C1r deficiency [MIM:216950] leads to the failure of the classical complement system activation pathway (C1 deficiency). Individuals with C1 deficiency are highly susceptible to infections by microorganisms and have greater risk in developing autoimmune diseases such as systemic lupus erythematosus (SLE)., PTM: The iron and 2-oxoglutarate dependent 3-hydroxylation of aspartate and asparagine is (R) stereospecific within EGF domains., similarity: Belongs to the peptidase S1 family., similarity: Contains 1 EGF-like domain., similarity: Contains 1 peptidase S1 domain., similarity: Contains 2 CUB domains., similarity: Contains 2 Sushi (CCP/SCR) domains., subunit: C1 is a calcium-dependent trimolecular complex of C1q, C1r and C1s in the molar ration of 1:2:2. C1r is a dimer of identical chains, each of which is activated by cleavage into two chains. A and B. connected by
