

## FAK (phospho Ser843) Monoclonal Antibody

-14387
;Mouse;Rat
dhesion kinase 1
tiserum was produced against synthesized peptide derived from human ound the phosphorylation site of Ser843. AA range:809-858
o-FAK (S843) Monoclonal Antibody detects endogenous levels of FAK only when phosphorylated at S843.
n PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
onal, Mouse,IgG
tibody was affinity-purified from mouse antiserum by chromatography using epitope-specific immunogen.
00-2000
l
year
FAK; FAK1; Focal adhesion kinase 1; FADK 1; Focal adhesion related nonkinase; FRNK; Protein phosphatase 1 regulatory subunit 71; 71; Protein-tyrosine kinase 2; p125FAK; pp125FAK
ction, focal adhesion. Cell membrane; Peripheral membrane protein; Ismic side. Cytoplasm, cell cortex. Cytoplasm, cytoskeleton. Cytoplasm, Ileton, microtubule organizing center, centrosome . Nucleus. Cytoplasm, Ileton, cilium basal body . Constituent of focal adhesions. Detected at bules.
ed in B and T-lymphocytes. Isoform 1 and isoform 6 are detected in lung sts (at protein level). Ubiquitous. Expressed in epithelial cells (at protein PubMed:31630787).
c activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine ate.,domain:The carboxy-terminal region is the site of focal adhesion g (FAT) sequence which mediates the localization of FAK1 to focal
C

	CRK-associated substrate (BCAR1) and CASL.,function:Non-receptor protein-tyrosine kinase implicated in signaling pathways involved in cell motility, proliferation and apoptosis. Activated by tyrosine-phosphorylation in response to either integrin clustering induced by cell adhesion or antibody cross-linking, or via G-protein coupled receptor (GPCR) occupancy by ligands such as bombesin or lysophosphatidic acid, or via LDL receptor occupancy. Plays a potential role in oncogenic transformations resulting in increased kinase activity.,PTM:Phosphorylated on 6 tyrosine residues upon activatio
Background	protein tyrosine kinase 2(PTK2) Homo sapiens This gene encodes a cytoplasmic protein tyrosine kinase which is found concentrated in the focal adhesions that form between cells growing in the presence of extracellular matrix constituents. The encoded protein is a member of the FAK subfamily of protein tyrosine kinases but lacks significant sequence similarity to kinases from other subfamilies. Activation of this gene may be an important early step in cell growth and intracellular signal transduction pathways triggered in response to certain neural peptides or to cell interactions with the extracellular matrix. Several transcript variants encoding different isoforms have been found for this gene, but the full-length natures of only four of them have been determined. [provided by RefSeq, Oct 2015],
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
