

Tak1 (phospho Thr187) Monoclonal Antibody

Isotype Reactivity Applications Gene Name Protein Name Immunogen Specificity Formulation	IgG Human;Mouse;Rat WB MAP3K7 Mitogen-activated protein kinase kinase kinase 7 The antiserum was produced against synthesized peptide derived from human MAP3K7 around the phosphorylation site of Thr187. AA range:161-210 Phospho-Tak1 (T187) Monoclonal Antibody detects endogenous levels of Tak1 protein only when phosphorylated at T187. Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Monoclonal, Mouse,IgG

inactivation.,similarity:Belongs to the protein kinase superfamily.,similarity:Belongs to the protein kinase superfamily. STE Ser/Thr protein kinase family. MAP kinase kinase kinase subfamily.,similarity:Contains 1 protein kinase domain.,subunit:Binds both upstream activators and downstream

substrates in multimolecular complexes. Interacts with MAP3K7IP1 and MAP3K7IP2. Interacts with PPM1L. Interaction with PP2A and PPP6C leads to its'

repressed activity.,

Background

The protein encoded by this gene is a member of the serine/threonine protein kinase family. This kinase mediates the signaling transduction induced by TGF beta and morphogenetic protein (BMP), and controls a variety of cell functions including transcription regulation and apoptosis. In response to IL-1, this protein forms a kinase complex including TRAF6, MAP3K7P1/TAB1 and MAP3K7P2/TAB2; this complex is required for the activation of nuclear factor.

MAP3K7P2/TAB2; this complex is required for the activation of nuclear factor kappa B. This kinase can also activate MAPK8/JNK, MAP2K4/MKK4, and thus plays a role in the cell response to environmental stresses. Four alternatively spliced transcript variants encoding distinct isoforms have been reported.
