

MEK-1 (phospho Thr386) Monoclonal Antibody

Catalog No BYmab-14393 Isotype IgG Reactivity Human;Mouse;Rat Applications WB Gene Name MAP2K1 Protein Name Dual specificity mitogen-activated protein kinase kinase 1 Immunogen The antiserum was produced against synthesized peptide derived from human MAP2K1 around the phosphorylation site of Thr386. AA range:344-393 Specificity Phospho-MEK-1 (T386) Monoclonal Antibody detects endogenous levels of MEK-1 protein only when phosphorylated at T386. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Monoclonal, Mouse,IgG Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-2000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20*C/1 year Synonyms MAP2K1; MEK1; PRKMK1; Dual specificity mitogen-activated protein kinase kinase 1; MAPKin shase kinase 1; MAPKK 1; MKK1; ERK activator kinase 1; MAPK/ERK kinase 1; MEK 1 Observed Band 45kD Cell Pathway Cytoplasm, cytoskeleton, microtubule organizing center, spindle pole body . Cytoplasm, cytoskeleton, microtubule org

retardation. Heart defects include pulmonic stenosis, atrial septal defects and
hypertrophic cardiomyopathy. Some affected individuals present with ectodermal
abnormalities such as sparse, friable hair, hyperkeratotic skin lesions and a
generalized ichthyosis-like condition. Typical facial features are similar to Noonan
syndrome. They include high forehead with bitemporal constriction, hypoplastic
supraorbital ridges, downslanting palpebral fissures, a depressed nasal bridge,
and posteriorly angulated ears with prominent helices. The inheritance of CFC
syndrome is autosomal dominantenzyme reg

Background

The protein encoded by this gene is a member of the dual specificity protein kinase family, which acts as a mitogen-activated protein (MAP) kinase kinase. MAP kinases, also known as extracellular signal-regulated kinases (ERKs), act as an integration point for multiple biochemical signals. This protein kinase lies upstream of MAP kinases and stimulates the enzymatic activity of MAP kinases upon wide variety of extra- and intracellular signals. As an essential component of MAP kinase signal transduction pathway, this kinase is involved in many cellular processes such as proliferation, differentiation, transcription regulation and development.
