

ERK 3 Monoclonal Antibody

IsotypeIgReactivityHApplicationsVGene NameMProtein NameMImmunogenT	BYmab-14741 lgG Human;Mouse;Rat WB MAPK6 Mitogen-activated protein kinase 6 The antiserum was produced against synthesized peptide derived from human
ReactivityHApplicationsVGene NameMProtein NameMImmunogenT	Human;Mouse;Rat WB MAPK6 Mitogen-activated protein kinase 6 The antiserum was produced against synthesized peptide derived from human
ApplicationsVGene NameMProtein NameMImmunogenT	WB MAPK6 Mitogen-activated protein kinase 6 The antiserum was produced against synthesized peptide derived from human
Gene NameMProtein NameMImmunogenT	MAPK6 Mitogen-activated protein kinase 6 The antiserum was produced against synthesized peptide derived from human
Protein Name M Immunogen T	Mitogen-activated protein kinase 6 The antiserum was produced against synthesized peptide derived from human
Immunogen T	The antiserum was produced against synthesized peptide derived from human
•	
	p97 MAPK. AA range:461-510
Specificity E	ERK 3 Monoclonal Antibody detects endogenous levels of ERK 3 protein.
Formulation L	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source N	Monoclonal, Mouse,IgG
	The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution V	WB 1:500-2000
Concentration 1	1 mg/ml
Purity ≥	≥90%
Storage Stability -2	-20°C/1 year
N	MAPK6; ERK3; PRKM6; Mitogen-activated protein kinase 6; MAP kinase 6; MAPK 6; Extracellular signal-regulated kinase 3; ERK-3; MAP kinase isoform p97; p97-MAPK
Observed Band 8	35kD
Cell Pathway C	Cytoplasm . Nucleus . Translocates to the cytoplasm following interaction with MAPKAPK5
	Highest expression in the skeletal muscle, followed by the brain. Also found in neart, placenta, lung, liver, pancreas, kidney and skin fibroblasts.
p ti k p (I T	catalytic activity:ATP + a protein = ADP + a chosphoprotein.,cofactor:Magnesium.,domain:The TXY motif contains the hreonine and tyrosine residues whose phosphorylation activates the MAP kinases.,enzyme regulation:Activated by threonine and tyrosine chosphorylation.,function:Phosphorylates microtubule-associated protein 2 (MAP2). May promote entry in the cell cycle.,PTM:Dually phosphorylated on Thr-626 and Tyr-628, which activates the enzyme.,similarity:Belongs to the protein kinase superfamily. CMGC Ser/Thr protein kinase family. MAP kinase

	subfamily.,similarity:Contains 1 protein kinase domain.,tissue specificity:Highest expression in the skeletal muscle, followed by the brain. Also found in heart, placenta, lung, liver, pancreas, kidney and skin fibroblasts.,
Background	The protein encoded by this gene is a member of the Ser/Thr protein kinase family, and is most closely related to mitogen-activated protein kinases (MAP kinases). MAP kinases also known as extracellular signal-regulated kinases (ERKs), are activated through protein phosphorylation cascades and act as integration points for multiple biochemical signals. This kinase is localized in the nucleus, and has been reported to be activated in fibroblasts upon treatment with serum or phorbol esters. [provided by RefSeq, Jul 2008],
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
