

TGFβ2 Monoclonal Antibody

Catalog No	BYmab-16085
Isotype	IgG
Reactivity	Human;Mouse;Rat
Applications	WB
Gene Name	TGFB2
Protein Name	Transforming growth factor beta-2 (TGF-beta-2) (BSC-1 cell growth inhibitor) (Cetermin) (Glioblastoma-derived T-cell suppressor factor) (G-TSF) (Polyergin)
Immunogen	The antiserum was produced against synthesized peptide derived from human TGF beta2. AA range:361-410
Specificity	The antibody detects endogenous TGF β 2
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Monoclonal, Mouse,IgG
Purification	The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	WB 1:500-2000
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	Transforming growth factor beta-2 (TGF-beta-2;BSC-1 cell growth inhibitor;Cetermin;Glioblastoma-derived T-cell suppressor factor;G-TSF;Polyergin)
Observed Band	47 12kD
Cell Pathway	[Latency-associated peptide]: Secreted, extracellular space, extracellular matrix .; [Transforming growth factor beta-2]: Secreted .
Tissue Specificity	Aorta endothelial cell,Lung,
Function	disease:A chromosomal aberration involving TGFB2 is found in a family with Peters anomaly [MIM:604229]. Translocation t(1;7)(q41;p21) with HDAC9. Peters anomaly consists of a central corneal leukoma, absence of the posterior corneal stroma and Descemet membrane, and a variable degree of iris and lenticular attachments to the central aspect of the posterior cornea.,function:TGF-beta 2 has suppressive effects on interleukin-2 dependent T-cell growth.,online information:TGF beta-2 entry,similarity:Belongs to the TGF-beta family.,subunit:Homodimer; disulfide-linked.,

Background

This gene encodes a secreted ligand of the TGF-beta (transforming growth factor-beta) superfamily of proteins. Ligands of this family bind various TGF-beta receptors leading to recruitment and activation of SMAD family transcription factors that regulate gene expression. The encoded preproprotein is proteolytically processed to generate a latency-associated peptide (LAP) and a mature peptide, and is found in either a latent form composed of a mature peptide homodimer, a LAP homodimer, and a latent TGF-beta binding protein, or in an active form consisting solely of the mature peptide homodimer. The mature peptide may also form heterodimers with other TGF-beta family members. Disruption of the TGF-beta/SMAD pathway has been implicated in a variety of human cancers. A chromosomal translocation that includes this gene is associated with Peters' anomaly, a congenital defect of the an
