Cell Pathway	Cell membrane ; Multi-pass membrane protein . Localized to the basolateral membrane of polarized epithelial cells.
Tissue Specificity	Detected in erythrocytes (at protein level). Expressed in placenta, intestine, muscle and spleen.
Function	Major iron transporter that plays a key role in balancing cellular and systemic iron levels . Transports iron from intestinal, splenic, and hepatic cells into the blood to provide iron to other tissues (By similarity). Controls therefore dietary iron uptake, iron recycling by macrophages, and release of iron stores in hepatocytes (By similarity). When iron is in excess, hepcidin/HAMP levels increase resulting in a degradation of ferroportin/SLC40A1 limiting the iron efflux to plasma .
