Function	Associates with the mTORC2 complex that regulates cellular processes including survival and organization of the cytoskeleton . Regulates the activity of the mTORC2 complex in a substrate-specific manner preventing for instance the specific phosphorylation of PKCs and thereby controlling cell migration . Plays a role in the stimulation of ZFP36-mediated mRNA decay of several ZFP36-associated mRNAs, such as TNF-alpha and GM-CSF, in response to stress . Required for ZFP36 localization to cytoplasmic stress granule (SG) and P-body (PB) in response to stress .
