| <b>Cell Pathway</b>       | Secreted, extracellular space, extracellular matrix, basement membrane . Major component.                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Tissue Specificity</b> | Expressed in kidney, spleen, mammary gland, aorta, heart, ovary, prostate and fetal spleen.                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Function</b>           | function:May play an important role in neural, kidney and vascular development. Promotes neurite elongation from olfactory bulb explants.,similarity:Contains 1 laminin N-terminal domain.,similarity:Contains 1 NTR domain.,similarity:Contains 3 laminin EGF-like domains.,subcellular location:Major component.,subunit:May form a homodimer.,tissue specificity:Expressed in kidney, spleen, mammary gland, aorta, heart, ovary, prostate and fetal spleen., |
| <b>Background</b>         | This gene encodes a member of the netrin family of proteins, which function in various biological processes including axon guidance, tumorigenesis, and angiogenesis. Netrins are laminin-related proteins that have an N-terminal laminin-type domain, epidermal growth factor-like repeat domain, and a positively charged heparin-binding domain at the C-terminus. The protein encoded by this                                                               |

**Nanjing BYabscience technology Co.,Ltd**

gene is involved in processes including neurite growth and migration, angiogenesis and mural cell adhesion to endothelial cells. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jul 2016],

**matters needing attention**

Avoid repeated freezing and thawing!

**Usage suggestions**

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
