Function	function:Inhibits activation of NF-kappa-B mediated by TNF.,similarity:Contains 1 RING-type zinc finger.,subunit:Binds TRAF1 and TRAF2 and is part of the receptor-TRAF signaling complex (By similarity). Interacts with CYLD.,
Background	This gene encodes a protein that contains an N-terminal RING finger motif and a putative coiled-coil domain. A similar murine protein interacts with TNFR-associated factor 1 (TRAF1), TNFR-associated factor 2 (TRAF2), and cylindromatosis. The interaction with TRAF2 inhibits TRAF2-mediated nuclear factor kappa-B, subunit 1 activation that is required for cell activation and
