| <b>Tissue Specificity</b> | Strongly expressed in heart and skeletal muscle, moderately in brain and pancreas.                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Function</b>           | alternative products:Additional isoforms seem to exist. Experimental confirmation may be lacking for some isoforms,function:Inhibits the interaction of APBA2 with beta-amyloid precursor protein (APP), and hence allows formation of beta-amyloid.,PTM:Phosphorylated by NEK2.,similarity:Contains 1 ABM domain.,similarity:Contains 1 EF-hand domain.,subunit:Interacts with the N-terminal domain of APBA2. Interacts with NEK2.,tissue specificity:Strongly |

**Nanjing BYabs science technology Co.,Ltd**

expressed in heart and skeletal muscle, moderately in brain and pancreas.,

**Background**

The protein encoded by this gene interacts with the amino-terminal domain of the neuron-specific X11-like protein (X11L), inhibits the association of X11L with amyloid precursor protein through a non-competitive mechanism, and abolishes the suppression of beta-amyloid production by X11L. This protein, together with X11L, may play an important role in the regulatory system of amyloid precursor protein metabolism and beta-amyloid generation. The protein is phosphorylated by NIMA-related expressed kinase 2, and localizes to the Golgi apparatus. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008],

**matters needing attention**

Avoid repeated freezing and thawing!

**Usage suggestions**

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.

## Products Images

Western Blot analysis of various cells using APBA2BP Polyclonal Antibody

Immunofluorescence analysis of A549 cells, using NECAB3 Antibody. The picture on the right is blocked with the synthesized peptide.

Western blot analysis of lysates from HepG2, COLO, and HT-29 cells, using NECAB3 Antibody. The lane on the right is blocked with the synthesized peptide.

Immunohistochemical analysis of paraffin-embedded human liver cancer. 1, Antibody was diluted at 1:200(4° overnight). 2, Tris-EDTA,pH9.0 was used for antigen retrieval. 3,Secondary antibody was diluted at 1:200(room temperature, 45min).
