| Background                | This gene encodes a microtubule-associated serine/threonine kinase. Mutations at this locus have been associated with autosomal dominant thrombocytopenia, also known as thrombocytopenia-2. Alternatively spliced transcript variants have been described for this locus. [provided by RefSeq, Feb 2010], |
| matters needing attention | Avoid repeated freezing and thawing!                                                                                                                                                                                                                                                                       |
| Usage suggestions         | This product can be used in immunological reaction related experiments.
