Function	function: ICAM proteins are ligands for the leukocyte adhesion protein LFA-1 (integrin alpha-L/beta-2). During leukocyte trans-endothelial migration, ICAM1 engagement promotes the assembly of endothelial apical cups through SGEF and RHOG activation. In case of rhinovirus infection acts as a cellular receptor for the virus., online information: ICAM-1, online information: Icosahedral capsid structure, online information: Intercellular adhesion molecule entry, polymorphism: Homozygotes with ICAM1-Kalifi Met-56 seem to have an increased risk for cerebral malaria., PTM: Monoubiquitinated, which is promoted by MARCH9 and leads to endocytosis., similarity: Belongs to the immunoglobulin superfamily. ICAM family., similarity: Contains 5 Ig-like C2-type

Background

This gene encodes a cell surface glycoprotein which is typically expressed on endothelial cells and cells of the immune system. It binds to integrins of type CD11a / CD18, or CD11b / CD18 and is also exploited by Rhinovirus as a receptor. [provided by RefSeq, Jul 2008],
