Immunogen The antiserum was produced against synthesized peptide derived from the SF3B4. AA range:61-110 Specificity SAP 49 Monoclonal Antibody detects endogenous levels of SAP 49 protection Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium az Monoclonal, Mouse,lgG	
SF3B4. AA range:61-110 Specificity SAP 49 Monoclonal Antibody detects endogenous levels of SAP 49 prot Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium az Monoclonal, Mouse,lgG	
Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium az Monoclonal, Mouse,IgG	human
Source Monoclonal, Mouse,IgG	tein.
5	ide.
Purification The antibody was affinity-purified from mouse antiserum by	
affinity-chromatography using epitope-specific immunogen.	
Dilution WB 1:500-2000	
Concentration 1 mg/ml	
Purity ≥90%	
Storage Stability -20°C/1 year	
Synonyms SF3B4; SAP49; Splicing factor 3B subunit 4; Pre-mRNA-splicing factor SkDa subunit; SF3b50; Spliceosome-associated protein 49; SAP 49	SF3b 49
Observed Band 55kD	
Cell Pathway Nucleus .	
Tissue Specificity Ovarian carcinoma, Skin, Testis, Thymus,	
function: Subunit of the splicing factor SF3B required for 'A' complex asset formed by the stable binding of U2 snRNP to the branchpoint sequence pre-mRNA. Sequence independent binding of SF3A/SF3B complex upst the branch site is essential, it may anchor U2 snRNP to the pre-mRNA. It be involved in the assembly of the 'E' complex. SF3B4 has been found in 'B' and 'C' as well. Belongs also to the minor U12-dependent spliceosom is involved in the splicing of rare class of nuclear pre-mRNA intron., similarity: Belongs to the SF3B4 family., similarity: Contains 2 RRM recognition motif) domains., subunit: Component of splicing factor SF3B v composed of at least eight subunits; SF3B1/SAP155/SF3B155,	(BPS) in tream of May also า complex

	SF3B2/SAP145/SF3B145, SF3B3/SAP130/SF3B130, SF3B4/SAP49/SF3B49, SF3B14A, PHF5A/SF3B14B, SF3B10 and SF3B125. SF3B associates with the splicing factor SF3A
Background	This gene encodes one of four subunits of the splicing factor 3B. The protein encoded by this gene cross-links to a region in the pre-mRNA immediately upstream of the branchpoint sequence in pre-mRNA in the prespliceosomal complex A. It also may be involved in the assembly of the B, C and E spliceosomal complexes. In addition to RNA-binding activity, this protein interacts directly and highly specifically with subunit 2 of the splicing factor 3B. This protein contains two N-terminal RNA-recognition motifs (RRMs), consistent with the observation that it binds directly to pre-mRNA. [provided by RefSeq, Jul 2008],
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
