Tissue Specificity Predominantly expressed in testis.	
Function function:Structural component of ciliary and flagellar microtubules. Form filamentous polymers in the walls of ciliary and flagellar microtubules.,similarity:Belongs to the tektin family.,tissue specificity:Predominantly expressed in testis.,	;
This gene product belongs to the tektin family of proteins. Tektins compr family of filament-forming proteins that are coassembled with tubulins to ciliary and flagellar microtubules. This gene is predominantly expressed testis and in mouse, tektin 1 mRNA was localized to the spermatocytes a spermatids in the seminiferous tubules, indicating that it may play a role spermatogenesis.
