| <b>Function</b>                  |                                                                                                                                                                                                                                                                                                             |
| <b>Background</b>                | SUMO1 (UBL1; MIM 601912) is a small ubiquitin-like protein that can be covalently conjugated to other proteins. SENP2 is one of a group of enzymes that process newly synthesized SUMO1 into the conjugatable form and catalyze the deconjugation of SUMO1-containing species.[supplied by OMIM, Apr 2004], |
| <b>matters needing attention</b> | Avoid repeated freezing and thawing!                                                                                                                                                                                                                                                                        |

## Usage suggestions

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.

## Products Images

Various whole cell lysates (30ug) were separated by 10% SDS-PAGE, and the membrane was blotted with SENP2 antibody at 1ug/ml. The HRP-conjugated anti-Mouse IgG antibody (Cat:RS0001) was used to detect the antibody. Predicted band size: 68kDa
