Function	function:Repulsive guidance molecules (Rgm) are involved in the guidance of growth cones of the developing neurons.,similarity:Belongs to the repulsive guidance molecule (RGM) family.,
Background	This gene encodes a member of the repulsive guidance molecule family. The encoded protein is a glycosylphosphatidylinositol-anchored glycoprotein that functions as an axon guidance protein in the developing and adult central nervous system. This protein may also function as a tumor suppressor in some cancers. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Oct 2009],
