| <b>Tissue Specificity</b> | Expressed in kidney and lung and to a lower extent in brain, pregnant uterus, placenta, thyroid gland and blood vessels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Function</b>           | developmental stage:Expressed in fetal kidney, cochlea, eye, heart and lung.,domain:The MAM domain is required for localization at the cell surface.,function:Functional ligand of integrin alpha-8/beta-1 in kidney development. Regulates the expression of GDNF with integrin alpha-8/beta-1 which is essential for kidney development. May also play a role in the development and function of various tissues, regulating cell adhesion, spreading and survival through the binding of several integrins.,similarity:Belongs to the nephronectin family.,similarity:Contains 1 MAM domain.,similarity:Contains 5 EGF-like domains.,subcellular location:Trapped on the cell surface or in the extracellular matrix.,subunit:Homodimer and homotrimer.,tissue specificity:Expressed in kidney and lung and to a lower extent in brain, pregnant |

**Nanjing BYabscience technology Co.,Ltd**

uterus, placenta, thyroid gland and blood vessels.,

## Background

**matters needing attention** Avoid repeated freezing and thawing!

**Usage suggestions** This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.

## Products Images

Western blot analysis of lysates from HpeG2 cells,  
primary antibody was diluted at 1:1000, 4°over night
