| Observed Band             |                                                                                                                                                                                                                                                                                             |
| Cell Pathway              | Secreted .                                                                                                                                                                                                                                                                                  |
| Tissue Specificity        | Expressed prominently in the placenta and is not detected in any other tissues examined.                                                                                                                                                                                                    |
| Function                  | function:Has a low ribonuclease activity.,similarity:Belongs to the pancreatic ribonuclease family.,tissue specificity:Expressed prominently in the placenta and is not detected in any other tissues examined.,                                                                            |
| Background                | The protein encoded by this gene belongs to the pancreatic ribonuclease family, a subset of the ribonuclease A superfamily. The protein is expressed prominently in the placenta and exhibits antimicrobial activity against pathogenic bacteria and fungi. [provided by RefSeq, Oct 2014], |
| matters needing attention | Avoid repeated freezing and thawing!                                                                                                                                                                                                                                                        |
